

Science Leader's Biography

- ▶ I have been leading Science at Oakhill for a number of years, and it is a role I am truly passionate about. I enjoy the practical nature of Science and the opportunities it gives children to explore, experiment, and ask questions. For me, the most exciting part is discovering the 'why' and 'how' behind the world around us and helping pupils develop that same sense of curiosity and wonder. I also encourage links with STEM where appropriate, ensuring that Science connects with real-world applications. My aim is to make Science engaging, hands-on, and meaningful so that every child feels inspired to learn and investigate.
